

Your Digital Eye Health

Bridgemill Eyecare is proud to offer you state-of-the-art ocular imaging that allows our doctors to full evaluate the health of your eyes. It can be used in early detection and management of eye diseases such as age-related macular degeneration, cataracts, central retinal diseases, retinal holes, optic nerve disease, pre-cancerous lesions, hypertensive retinopathy, and diabetic retinopathy. Images are stored to compare with future tests so that a complete eye history can be generated. This allows our doctors to see critical changes that may not have been identified without these tests.

We strongly recommend that ALL our patients receive this test. It is important for those patients who have a personal or family history of high blood pressure, diabetes, retinal problems, headaches, floaters, flashing light streaks, a strong prescription for glasses, diminishing vision, macular degeneration, hypertensive retinopathy, and diabetic retinopathy. This test can be performed today and the results are obtained instantly.

Yes, I do want Optos.

Optos is an ultra-wide image that captures more than 80% of your retina. This unique map enhances the doctor's ability to detect even the earliest sign of disease. We are offering Optos imaging at a ***professional courtesy rate of \$39.00 and is NOT covered by insurance.***

No, I don't want Optos, only if the doctor feels it's necessary.
